

Concrete Paver - Colour and Product Variation Disclaimer

All Concrete Pavers supplied are manufactured by Urban Paving to NZS3116:2002.

We manufacture using natural raw materials and pigments. As such, variations in colour, shade, texture, and finish are an inherent characteristic of the manufacturing and curing process. These variations may occur between different production batches and even within the same batch.

Efflorescence, Mottling and “Picture Framing” may also appear on the surface of concrete products over time and can occur during manufacture, curing, storage or installation. This is a natural occurrence in cement-based materials and does not affect the structural integrity or performance of the pavers. These appearance changes are not considered a defect.

Customers are advised that:

- Samples, brochures, and display products are indicative only and may not represent the exact colour or finish of the supplied goods.
- Various factors such as environmental exposure, storage method, installation conditions, sealing, and maintenance practices can influence the appearance of the pavers over time.

No warranty or guarantee is given that supplied products will match samples or previous orders exactly. Variations in colour, texture, and finish shall not be deemed defects and are not grounds for rejection or replacement.

This disclaimer applies to all Concrete Paver products supplied unless otherwise agreed in writing.
